Art Unit: 1725

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 7-108,355 and further in view of JP 2000-52,006 and JP 3-161,153 for the same reasons as set forth in the last office action.

Namely, JP '355 substantially shows the invention as claimed except that it does not show the detailed structure of the EM stirring means. However, JP '006 shows to use an EM stirring means with poles of tapered end to reduce the leakage flux in the EM stirring means. It would have been obvious to use the tapered poles of JP '006 in the EM stirring means of JP '355 to reduce the leakage flux. Further, JP '153 show to use a traversing-magnetic-field type EM means to improve the stirring efficiency. It would have been obvious to provide a

· Art Unit: 1725

traversing-magnetic-field type EM stirring in JP '355 in view of JP '153 to improve the stirring efficiency. With respect to claim 9, it would have been obvious to provide a heat shield to a metallurgical structure element wherever it deemed necessary to shield the heat from the molten metal. With respect to claim 12, US 4,834,168 and 4,256,156 show that feature to be conventional.

- 4. Applicant's arguments filed Feb. 26, 2007 have been fully considered but they are not persuasive.
 - a. In page 4, last paragraph of the amendment applicant stated that the poles in JP '006 are tapered to accommodate electrical coil 6 which are wound around each pole and extend to the very tip of the poles thus rendering them non-salient. However, as shown in figures 2 and 3 of JP '006, they show the structure of each pole 7 having "inwardly salient pole tooth". The shape of pole 7 does not change after the coil 6 is wound around it.
 - b. In page 5, 2nd paragraph of the amendment applicant stated that in figure 6 of JP '006 the pole is shown without taper. Applicant is advised that figure 6 is the prior art pole, and figures 2 and 3 show the improved pole structure.
- 5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Application/Control Number: 10/561,067 Page 4

Art Unit: 1725

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the 6. examiner should be directed to Kuang Y. Lin whose telephone number is 571-272-1179. The examiner can normally be reached on Monday-Friday, 10:00-6:30,...

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
